

GO GREEN AROUND YOUR HOME

Name: _____

Hour: _____

VIDEO WORKSHEET

In this introduction to living green, students learn that with a few simple changes they can reduce the **toxins** in their personal space and reduce **waste** in every corner of their lives. They discover how to go beyond recycling by buying products that don't include wasted packaging. They find out there are natural cleaning products that do the job as well or better than the popular chemical brands. They uncover the hidden toxins in their personal care products and find healthier alternatives. They understand how organic foods are grown and why they can be safer to eat. Going green is here to stay so it's time to get on the Go Green Team!

Review

Directions: After watching "Go Green Around Your Home" answer the following questions.

1. How many plastic bags are used every year? 500 million? 50 billion? 500 billion?
2. What can you do at the grocery store to reduce waste?
3. How can you save energy on lighting in your home?
4. How much garbage does the average person create each day?
5. What slogan tells you how to cut down on all the garbage you create?

Activities

Your Green Home

List five things you can change to move toward a greener life.

1. _____
2. _____
3. _____
4. _____
5. _____

Measure Your Garbage

How can you figure out the amount of garbage you generate each day? Weigh it on a scale. Pick a day and save every single thing you would normally throw out. Include your waste from home, from school and from wherever you go such as a fast food restaurant. At the end of the day measure how much garbage you've collected.

Recycle Batteries

If you're like most people, you go through a lot of batteries. Batteries are filled with toxic chemicals so you don't want to send them to the garbage dump. So what can you do? Go on the Internet to www.earth911.org/. Enter the word batteries and your zip code. What businesses near you will recycle your old batteries?
